

# How to install this software?

---

## The first way

In `src` file, I contain all the source code, so you can compile it to get the executable file.

## The second way (Recommended)

I also contain a `visualizer.exe`. You can use the **command line of Qt 5.9 (cmd or PowerShell may not work)** and execute `windeployqt visualizer.exe` to get all the dependencies.

# How to use this software?

---

## Step One

Click `visualizer.exe`.

## Step Two

Click `select button` or `open->Select a File`. Then select a `.csv` file.

## Step Three

Choose the starting time and ending time.

## Step Four

Click `start` and you can get the line chart.
